

Mini Load

High throughput handling with high speed

Mini Load

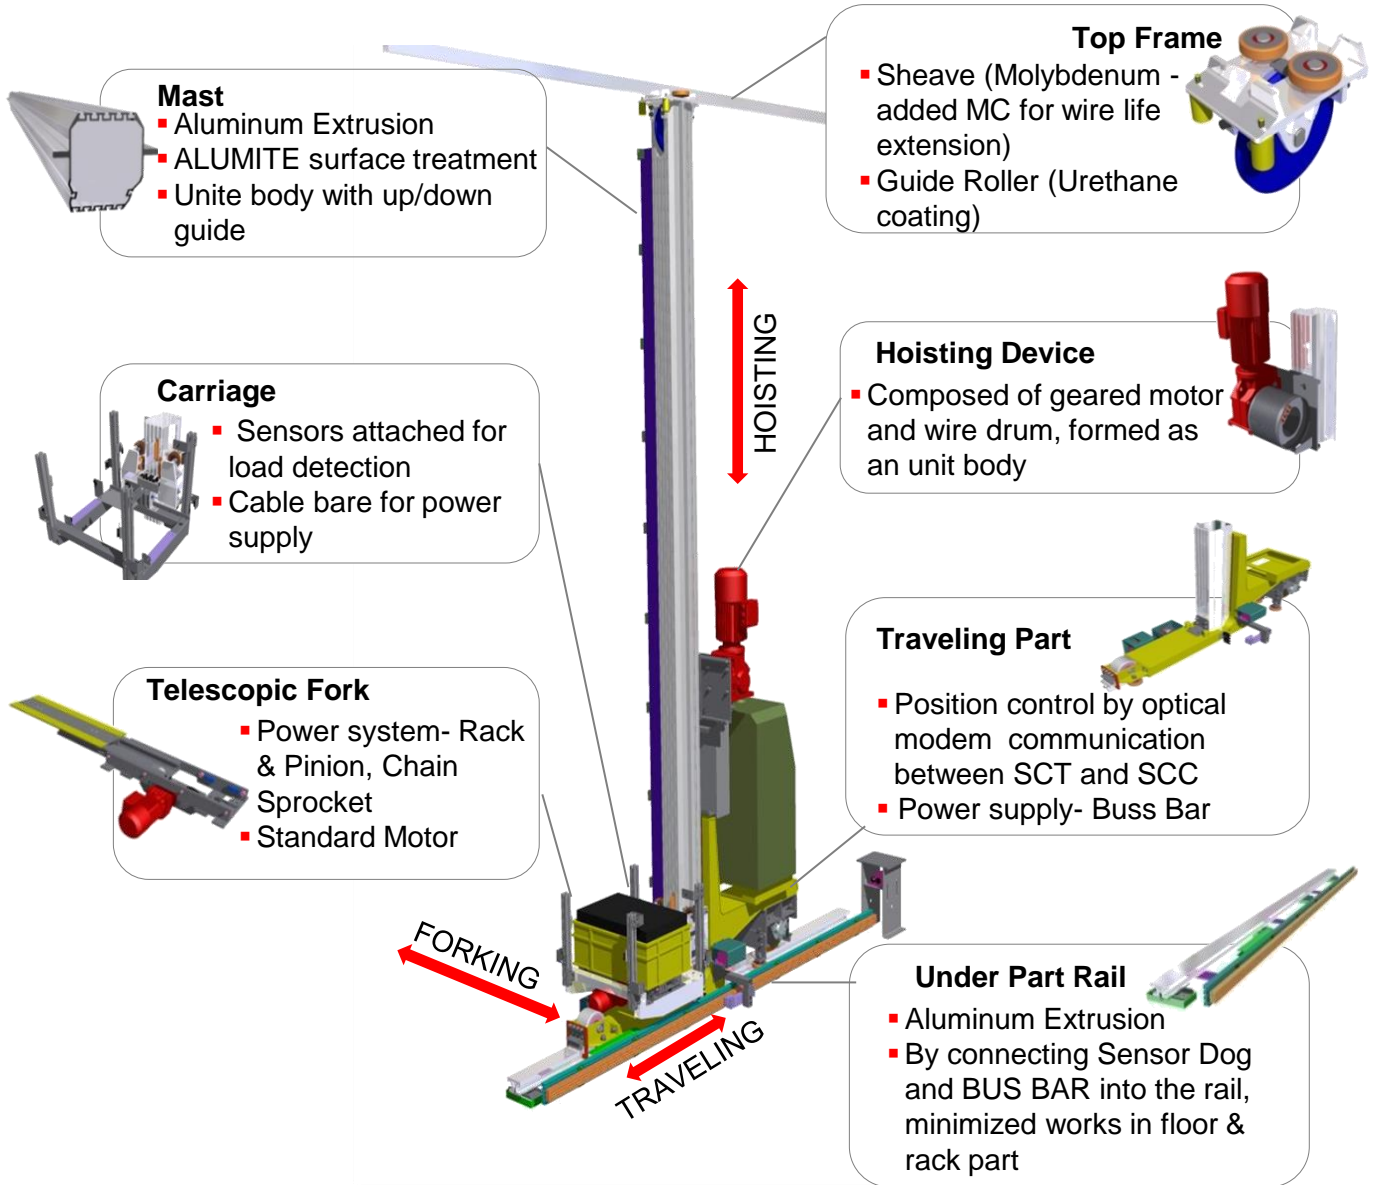

Mini Load handles loads typically in small containers and totes, or product itself in small size and light weight. Mini Load stacker crane provides dynamic and sharp performance with high velocity and excellent energy efficiency. Its handling devices can be flexibly designed to accommodate various types and sizes of loads. Outstanding speed and precise performance may well be key benefits especially when high Throughput handling, as well as optimal storage density is required. SMC Mini Load design ensures the highest quality and reliability while providing the ability to tailor it to best fit each customer's request.

Basic Specification

- ✓ Max. speed : Up to 350 m/min
- ✓ Fork Type: Single
- ✓ Load Range: Up to 50 kg (Bucket Included)
- ✓ Control Method: Motion Controller
- ✓ Travels in higher speed than unit load stacker crane
- ✓ Used on single or multi deep rack

COMPONENTS

➤ Main Component

Benefit

- High throughput handling with high speed
- Effective utilization of storage volume and space
- Single or multiple load handling module design
- Optimized design for service and maintenance
